(54) COMPOSITE INFORMATION PROCESSING SYSTEM

(57)Abstract

PURPOSE: To improve the response to a user, by connecting a composite information device to the 1st and the 2nd information devices and connecting a gate-way between the 1st and the 2nd networks for transmitting mutually information via the gate-way.

CONSTITUTION: A packet system network 1 transmitting in high speed and exchanging an image forms or the like and a line exchange system network 2 transmitting and exchanging information being low speed and having a long time for one transmission such as sound are connected with the gate-way 8. Common information devices 3a, 3b, information devices 5a, 5b and composite information devices 6a, 6b are connected to the network 1. Further, common information devices 4a, 4b and information devices 7a, 7b are connected to the system 2 and the devices 6a, 6b connected to the network 1 are connected. Each of the devices 6a, 6b is provided with an interface device and an input/output device corresponding to the networks 1, 2, the information is transmitted mutually via the gate-way 8, allowing to improve the response to the user.
